Revised Prototype

High-fidelity prototype / wireframe

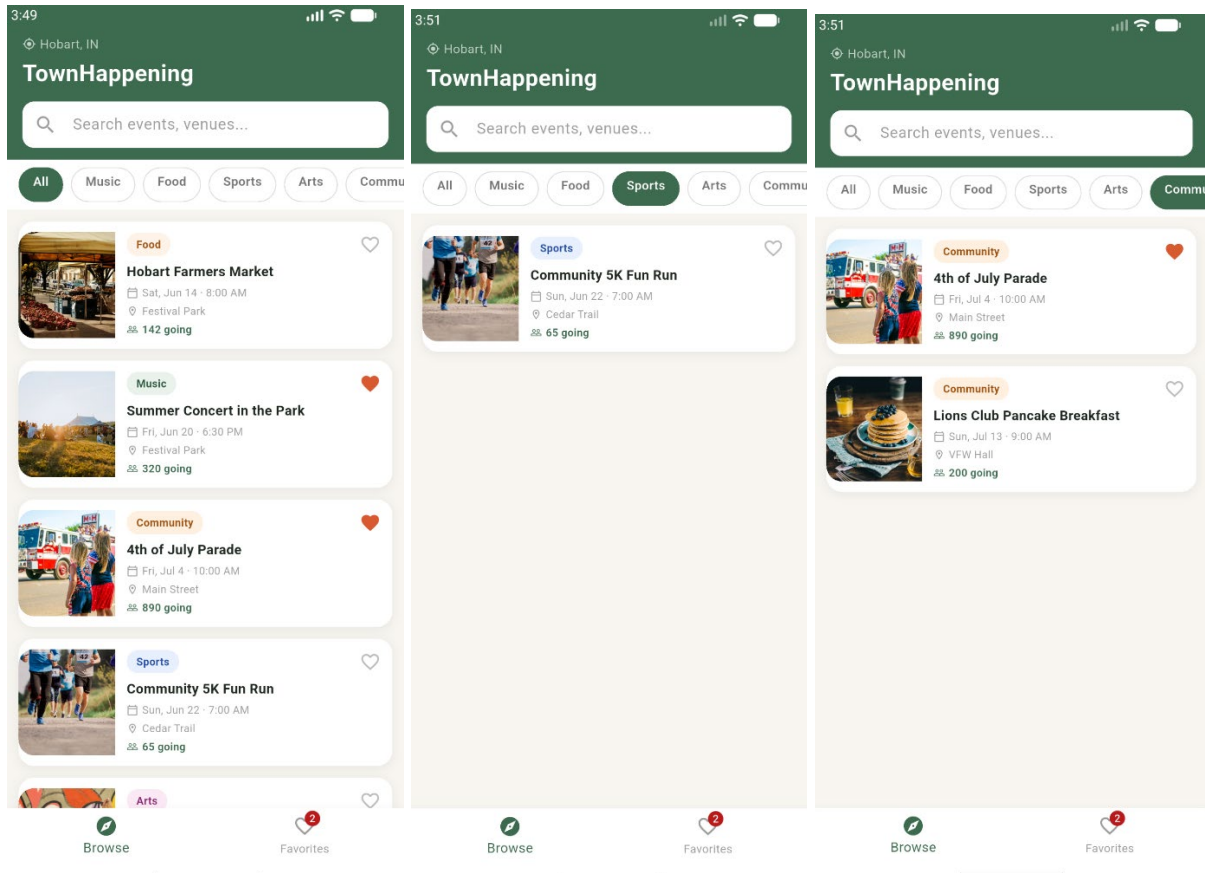

Figure 1- Home Screen

Figure 2- Category Filter

Figure 3- Community Filter

Figure 1 - Home Screen

- 1) Search bar - taps to open search and filter screen
- 2) Category chip - filters events by selected category
- 3) Event card - taps to open Event Detail screen
- 4) Heart Icon – saves the event to Favorites
- 5) Favorites Nav – taps to open Favorites screen
- 6) Location Header - User taps to trigger the Change Location dialog to appear over the current screen.

Figure 2 & 3 - Category Screen / Filter

- 1) Category chip – User taps to filter events by category. In this example, food is selected and highlights to indicate active filter.
- 2) Food badge on card – indicates the event category. The user taps on the badge to also filter by that category.
- 3) Bell Icon – The user taps to view notifications and event reminders which leads to notifications screen.

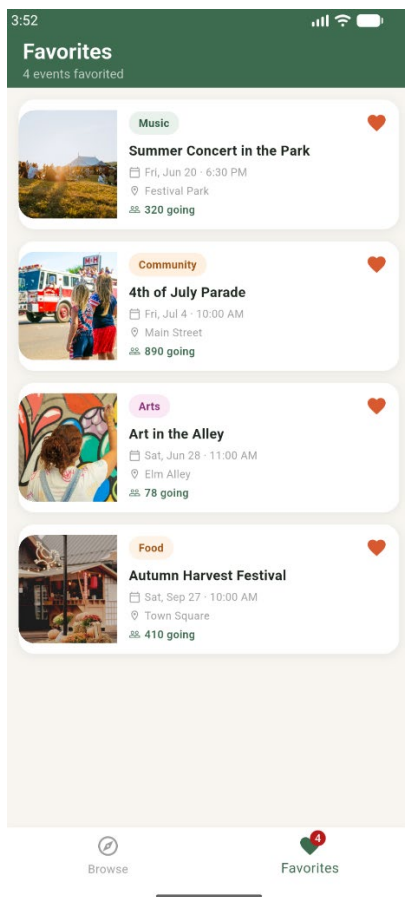

Figure 4- Favorites Screen

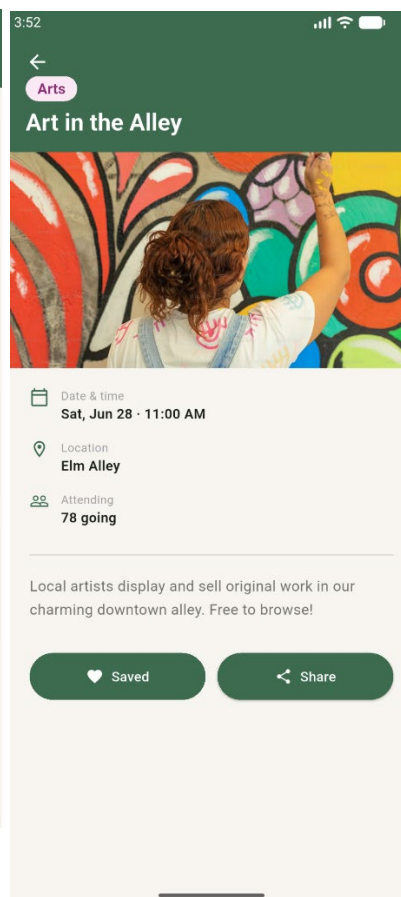

Figure 5- Event Detail Screen

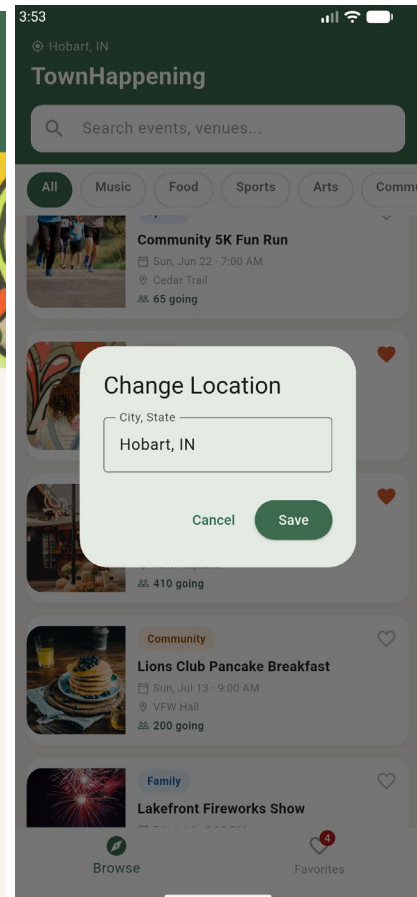

Figure 6 – Change Location

Figure 4- Favorites Screen

- 1) Favorites Header & Number of events favorites – Displays the Favorites Screen and a count of how many events the user has saved
- 2) Category Filter Chips – User taps to filter saved favorites by category. This helps the user find the specific saved events quickly

- 3) Filled Heart Icon – Indicates event is already saved. The user taps to remove the event from Favorites.
- 4) Event Card – The user taps anywhere on the card to open the Event Detail screen.
- 5) Browse Navigation – The user taps to return to the main Home Feed screen.
- 6) Favorites Nav – Currently on the active screen which is indicated to show the users they are on the Favorites page.

Figure 5 - Event Detail Screen

- 1) Category Badge – This indicates the event category where the users taps to filter home feed by this category.
- 2) Event Title – Displays the full event title name at the top of the detail screen
- 3) Image Placeholder – Displays event photo pulled from the source platform (Fb, Instagram, etc.)
- 4) Date & Time – Shows the full date and time of the event so the users can plan attendance.
- 5) Location – Shows the event venue where the user taps to open maps/directions.
- 6) Attending Count – Shows how many people are going to attend and interest.
- 7) Event Description – The full details about the event which includes cost, activities, and what to expect.
- 8) Save / Saved Button – User taps to save event to Favorites. The Button state changes to confirm saved.
- 9) Share Button – User taps to share event details via text, social media, or other apps.
- 10) Browse Nav – Where the user taps to return to Home Feed Screen.
- 11) Favorites Nav – Where the user taps to navigate to Favorites Screen.

Figure 6 - Change Location Dialog Screen

- 1) Location in header – User taps to trigger the Change Location dialog to appear over the current screen.
 - 2) Change Location Dialog – Popup that appears over the home feed which allows the user to update their town without leaving the screen.
 - 3) City, State Text Field – User taps to activate the field and type a new city and state. Default town will show.
 - 4) Cancel Button – User taps to dismiss the dialog without making any changed then returns to home feed.
 - 5) Save Button – The user taps to confirm the new location, the Home Feed will update and show events for the new town.
-

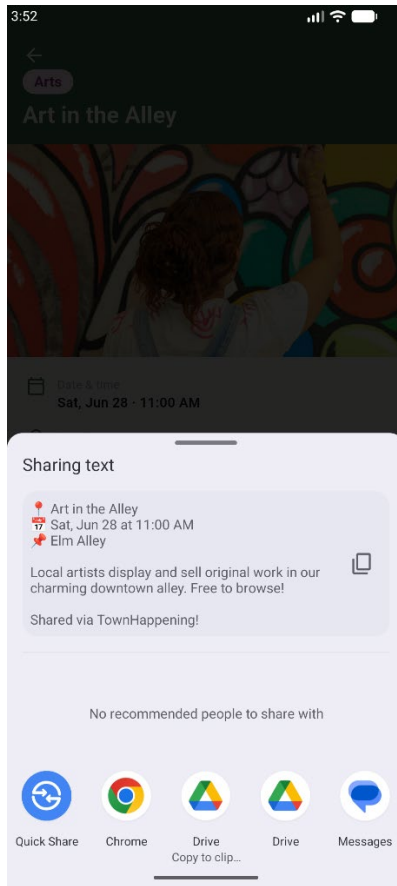

Figure 7- Share Screen

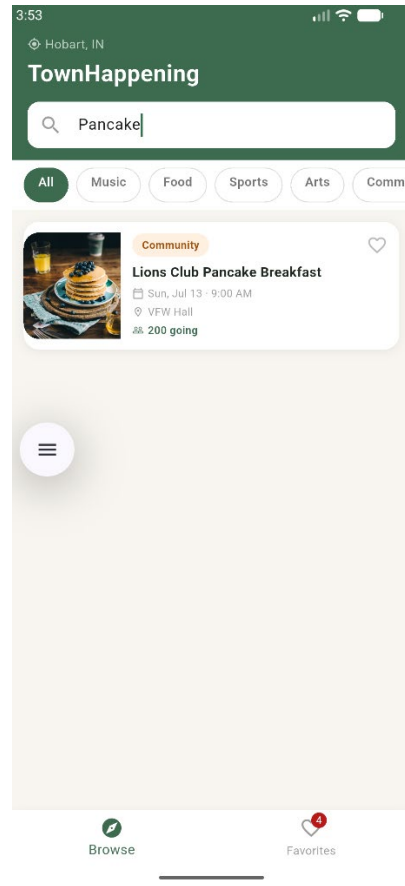

Figure 8- Search Functionality

Figure 7- Share Event Screen

- 1) Share Button Trigger – The user taps the share option on the main Event Detail screen to pull up the native sharing framework from the bottom of the display.
- 2) Sharing Text Preview Card – A dedicated container that generates an automated, clean text layout summary featuring the title, date, time, location pins, and description of the event.
- 3) Copy to Clipboard Action – A structured tap icon positioned on the right side of the text card container, allowing the user to copy the formatted text string to their clipboard instantly.
- 4) App Target Row – A horizontal scrolling row of system communication icons (such as Quick Share, Messages, or Drive) that lets the user seamlessly pass the event information directly into alternative communication networks.

Figure 8 – Search Functionality

- 1) Active Search Input Bar – A full-width text component positioned prominently near the header where the user inputs dynamic query strings (e.g., typing "Pancake") to immediately sift through localized data.

- 2) Contextual Results Grid – The main layout dynamic panel that automatically updates to filter and isolate specific, individual event cards that strictly align with the user's active search keyword string.
- 3) Persistent Category Filtering Chips – A horizontal sliding row of taxonomy categories (such as Music, Food, or Sports) that sits directly underneath the text query box to provide additional filtering layers.
- 4) Bottom Platform Anchors – Static interactive menu anchors featuring "Browse" and "Favorites" that allow the user to immediately dump their search session and toggle between root navigation views.
